

STORAGE ON PEAT

For Dairy Effluent

A SIMPLE SOLUTION FOR A MAJOR PROBLEM.

Our flexible tanks are used across the world to store dairy effluent, they are designed specifically to deal with dairy effluent and its chemical makeup.

WHY CONSIDER A FLEXIBLE TANK TO STORE YOUR DAIRY EFFLUENT?

- They are quick and easy to install, and don't require major civil engineering work
- Cost competitive to pond construction
- You can install them on peat, with very little earth and preparation work
- They are easy to shift to another location if required
- They are safe, there's no risk of anyone falling in
- Eliminates unwanted odours
- Retains all of the valuable nitrogen, rather than losing it into the atmosphere
- Does not capture unwanted rain water, which only increases the storage you need

These UV protected flexible tanks are guaranteed for 10 years by the French manufacturer, who has over 80 years of experience in the industry.
